What is Window Film?

What is Window Film?

Window Film is a thin sheet of optical grade polyester coating. When this film is applied to glass, it offers a permanent solution with a range of high-value benefits for residential and commercial applications. The film has colored dye and/or metal particles embedded into its surface that helps reduce the transmission of solar heat, light and ultraviolet rays through a pane of glass, simultaneously reducing glare. Various tint strengths and colors are available for more or less privacy. Window film is also available in various thicknesses. All film helps to prevent glass from breaking, but added thickness will increase safety and security benefits. There are some window

films that offer both solar and security features.

Benefits of Professional Installation

Consultation time with a professional window film company will help to determine the right film for your commercial or residential needs. Professional installers receive training and are certified through www.iwfa.com (International window film association) and its associated manufacturers/distributors offering you confidence as a customer that your film will be installed with a high level of quality and care. Extensive warranties are able to be offered because of this type of accreditation.

Types of Window Film

- Solar control Window Film
- Safety & Security Window Film
- Decorative Film (Architectural & Graphic)

All types are available for either residential or commercial applications. Consult with your window film professional to find the right solution for your home or business.

Features & Benefits

- **Solar Heat** – Energy reduction up to 83%
- **Radiant Heat** – Retention up to 20%
- **Glare** – Reduction up to 91%
- **UV Rays** – Rejection up to 99%
- **Safety & Security** – Increased
- **Privacy** – Increased

What does that really mean?

- **Money Savings** (Lower utility bills, less load on HVAC system)
- **Improved comfort**
- **Added privacy**
- **Greater protection against the unexpected**

Features & Benefits of SOLAR WINDOW FILM

Ultraviolet Ray Protection

Protect your business furniture and assets from fading and damage caused by ultraviolet rays.

Increase the Lifespan of your Assets

Your business interiors deserve to last a long time. It's an expense to replace damaged and faded furniture, draperies, blinds, carpets, flooring and artwork. The fading caused by the sun's ultraviolet rays wreaks havoc on interior furnishings and merchandise, shortening their life. Save money on replacement costs with an application of window film which screens out harmful UV rays that fade your furnishings. Window film will offer you the maximum protection from fading due to solar ultraviolet light and solar heat.

Regular Glass Doesn't Cut It

Clear single pane glass will reject 23-28% of the ultraviolet light from the sun. Insulated glass with Low E capabilities is slightly better, rejecting 36-41%. Window film installed on glass rejects 99%+ of solar ultraviolet light. Different types of clear glass and window systems will reject 13-29% of the solar heat. With window film, 70% of solar heat rejection is possible. Window film will also increase the winter time performance of your windows by retaining up to 15% of radiant heat.

Healthier Work Environment

Window film creates a healthier work environment for employees, customers and clients.

Keeping Sunscreen by Your Window Pane?

The sun's UV Rays that pass through our business windows do a lot more than just shed light and heat to the indoors. Harmful UV rays can also lead to health problems that otherwise could be prevented. Skin Cancers, sunburn, skin conditions, wrinkles, aging and eye injuries can all be caused by the streaming rays that are entering through unfiltered glass. By applying window film, you're providing a solution to the problem and showing people you care about their health and safety.

Protection Made Easier

Window film provides 99.9% UV rejection reducing serious health concerns. It also reduces the glare on surfaces like mirrors, windows, glass cabinets and picture frames, TV's and computer monitors.

Getting the Glare?

Window film protects eyes from the harsh UV rays that create eye fatigue and lower productivity. Drawing the curtains is a solution to the sun's glare in your eyes, but forces you to turn on artificial lighting that raises energy costs. Applying window film allows natural light to stream in without the harmful UV rays or glare affecting the atmosphere and your health. The low reflectivity provides a clear view of the outdoors while allowing natural light in to brighten up your office space.

Features & Benefits of **SAFETY & SECURITY WINDOW FILM**

Increased Security Measures | Protection 24/7 for Your Business.

Your business is a major investment. You can't always be there to protect it. While you're away, you can increase your peace of mind through additional security that security window film provides.

Shatter Proof Barrier

Window film creates an invisible barrier between your business interior and the outside world. When a thief tries to break the window, the glass shards are held together providing a shatter-proof performance that slows down any attempts an intruder makes to enter the premises. The quick and easy window entry now becomes difficult and deters the thief from continuing with fear of getting caught. Window film application will protect you from lost assets and inventory and keeps your business more secure.

Vandals Beware

Vandals can attack your premises with attempts to scrape sharp objects across your glass. The multilayer protection of window film acts as a barrier to destruction of your glass's appearance. It can be easily replaced and is less expensive than replacing a damaged window.

Natural and Man Made Disasters

The dangerous consequences of natural and manmade disasters that cause glass to shatter can be avoided. Window films are made of a strong rugged material that binds dangerous glass shards together, preventing the damage and injuries a broken window causes. Get peace of mind with the secure investment that window film provides to your business.

Features & Benefits of DECORATIVE WINDOW FILM

Decorative Films | Office windows & doors | Retail windows | Displays

Decorative films add flare to your business and bring privacy to your establishment.

Decorative Films for Your Business

Sometimes businesses need to increase the privacy between rooms or to the outdoors. Decorative films are a great way to save on etched glass by applying to the windows and increasing your privacy levels. Several designs and custom applications are available.

Decorative films allow natural and artificial light from outside the room to still shine in while obstructing the view from passers-by. It also allows you to separate the view from one room to another without replacing glass. You can get custom designs such as company logos or specialized designs to add a personal touch.

Business Appeal

Enhance your building's appearance, eliminate visual clutter and create a uniform appearance with window film. Window film makes building exteriors more attractive while breathing warmth and life into any interior. Increase your property value and create a visually appealing business that welcomes clients and customers.

Beautify your Business Property

Evolution Window Films provides film that lets natural light come in and provide a view to the outside world with optimal clarity and low reflectivity. Film comes in neutral tones that match and enhance existing glass without ruining the aesthetics of the original architectural design. With a color and style for any building design, from Designer Gray, StarLite to Soft Bronze, you're sure to find a color to compliment your design, protect your windows and beautify your property.
